No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C-terminus, of a first domain comprising a protein of interest, a second domain comprising a hydrophilic spacer and an affinity domain, each domain comprising amino acid residues. The present sequence represents the hinge-Fc region of human IgG1, used in example 3 of the present invention. The recombinant vector is used for the production of authentic recombinant proteins of interest. The method of the invention is useful for the expression of fusion proteins capable of isolation by affinity chromatography in pro- or eukaryotic cells. This method allows for the efficient cleavage and generation of authentic proteins of interest that do not contain extraneous (i.e. non-naturally occurring)

                                                                                                                                                                                                                                                                                                                                                          include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodeficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection. Cardiovascular diseases such as arteriosclerosis may also be treated. The AQP-1 containing fusion proteins have increased biological activity composite to the AQP-1 containing fusion proteins have increased
                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence was used in the production of AGP-1 fusion proteins. AGP-1 is a type II transmembrane protein. The fusion proteins comprise an Fc immunoglobulin region fused to the N-terminal portion of the AGP-1 protein. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-induced disorders. The proliferative disorders

OPG negatively regulates formation of osteoclasts in vitro and in vivo. It blocks the differentiation of osteoclasts from monocyte or macrophage precursors and the reabsorption of bone. The OPG-Fc fusion protein is administered for the treatment of bone loss resulting from osteoporosis, Paget's disease, osteomyelitis, hypercalcaemia, osteopenia associated with surgery or steroid administration, osteoperosis, bone loss due to rheumatoid arthitis, periodontal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for the prevention or treatme of lytic bone disease or multiple mysloma. Also the method can be used for preventing metastasis of cancer to bone or osteosclerotic bone metastasis. The method comprises administering an OPG (osteoprotegrin) polypeptide or OPG fusion protein. The OPG proteins (see AAB808908) can inhibit formation of osteoclasts (and thus bone resorption) by blocking differentiation from monocytes/macrophage precursors. The present sequence is the hinge, CH2 and CH3 regions of human IgGgammal. This sequence can be used to generate fusion proteins OPG and immunoglobulin, for use in the present invention. The generate OPG and immunoglobulin, for use in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Fig 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The invention relates to a method for increasing and maintaining CC haematocrit in a mammal. The method comprises administering a CC hyperglycosylated analogue of erythropoietin (Epo) in a pharmaceutical CC composition, less frequently than an equivalent molar amount of and at CC a lower molar amount than recombinant human Epo (rHuEpo) to obtain a CC comparable target haematocrit. Epo is a glycoprotein hormone necessary CC for the maturation of erythroid progenitor cells into erythrocytes. CC Human Epo analogue is useful for raising and maintaining haematocrit to a comparable target haematocrit in a mammal suffering from anaemia CC associated with a decline or loss of kidney function, myelosuppressive therapy comprising chemotherapeutic or anti-viral drugs or associated with excessive blood loss during surgical procedures, and in cancer CC condition. The present sequence is human immunoglobulin G (IgG) gamma 1 CC constant heavy chain (CH2, CH3) hinge region used to construct Epo hyperglycosylated analogue fusion protein.

The yeast can be used for detecting or isolating the Fc part of immunoglobulin (1g)G. The yeast is useful for a stable supply of highly active catalytic antibody e.g. by screening novel functional molecules and in isolating Fc-carrying secretory proteins. The yeast of the invention is capable of adhering specifically to a combinatorial antibody library with an Fc-carrying antibody component. The current sequence represents the human IgG Fc fragment

                                                                                                                                                                                                                                                                                                                                               designated Zinfilz (1). (I) has cytostatic, immunosuppressive, contributions and incorpretentic, antiarthritic, antiasthmatic, nephrotropic and hypotensive activities, and can be used in gene therapy. (I) can be used for cativities, and can be used in gene therapy. (I) can be used for cinhibiting, in a mammal, the activity of a ligand that binds Ztnfrll (e.g. ZTNF4), for treating disorders and diseases associated with B cymphocytes, activated B lymphocytes or resting B lymphocytes, and for cinhibiting the proliferation of tumour cells. (I) is useful for treating gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, correnal disease such as glomerulonephritis, vasculitis, chronic lymphoid correnal disease such as glomerulonephritis, vasculitis, chronic lymphoid correnal disease, multiple myelomas, lymphomas, light chain neuropathy, or amyloidosis, hypertension, large vessel disease, graft-versus host conduction and cytokine production, and for modulating the immune system, for regulating B cell responses and communication. Human Zinfrlz is located to chromosome 22q13.2. The communication. Human Zinfrlz is located to chromosome 22q13.2. The communication is used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a fusion peptide which consists of the extracellular domain of a mammalian oxidized LDL (low density lipoprotein) receptor, fused to a partial heavy chain of a mammalian immunoglobulin containing all or part of the constant region. Oxidize LDL is a denatured form of LDL occurring in patients having arteriosclerosis or hyperlipidaemia, and the fusion peptide can be used for the assay of oxidized LDL in biological samples from such patients, for the diagnosis of the disorders. It can also be used therapeutically for the prevention and treatment of arteriosclerosis hyperlipidaemia. The present sequence represents the protein from the vector DNA of pCd51neg1 comprising human IgG1 Fc region genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-JUL-1999

                                                                                                                                                                                                                                                                                                            This sequence represents a fusion protein which comprises the mouse heat shock antigen (HSA) fused to human IgG1 Fc. This protein may be used in the method of the invention for inhibiting destruction of tissue initiated by autoreactive T cells (aTC). The method is especially used to treat subjects suspected of having autoimmune diseases, particularly multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus, psoriasis, diabetes and allergy, also transplant rejection. Transgenic mice that express human CD24 on their T cells are useful as models for testing drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chimeric -
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inhibiting tissue destruction by autoreactive T cells, useful treating autoimmune diseases, by administering a heat-shock antigen/CD24 polypeptide or its antibody

                                                                                                                                                                                                                                                                                                                                                           The gene coding for human alkaline phosphatase is fused downstream of a gene coding for either the variable and CHI regions of an antibody heavy chain or an antibody light chain. Coexpression of the H- and L-chain sequences, one of which is fused to the AP gene, results in production of AP-labelled antibodies suitable for use in immunoassays. The present sequence is from a human IgG heavy chain constant region.

                                                                                                                                                                                                                                                                                                                  Qy
                                                                          밁
                                                                                                                                                                                          δÃ
                                                                                                                                                                                                                                                                                                                                                                                                         receptor. Those cells can then be used to detect the presence of a commodulator of zcytor10 protein by culturing the cells in the presence of a test ligand and comparing levels of activity of mouse zcytor10 cc in the presence and absence of the test sample. Similarly, detection of zcytor10 receptor ligand within a test sample can be achieved. The method comprising contacting a test sample containing an amino cc acid sequence from Cysls or Gly25 to pro230 of the zcytor 10 cc cytokine receptor and detecting the binding of the polypeptide to a cligand in the sample. Specified peptide fragments of the zcytor 10 cc ytokine receptor and the methods described are used to identify cligands that stimulate the proliferation and/or development of the acytokine receptor and the methods described are used to identify cc haematopoietic, lymphoid and myeloid cells. Peptide fragments of the cytokine receptor are useful for treating lymphoid, immune, cc inflammatory, splenic, blood or bone disorders and for generating continuous directed against the receptor. A vector expressing a construct the extracellular cytokine binding domain of zcytor 10 cc is fused to the heavy chain of IgG gamma and the extracellular cytokine receptor subunit (an interlukin receptor subunit is fused to human zcytor 10 cr proposed to the heteromeric cytokine receptor subunit (an interlukin receptor subunit is fused to human server.)
                                                                                                                                                                                                                                      Query Match

activities, and can be used in vaccines. (I) or an antibody binding (I) can be used for suppressing the immune system for reducing rejection of tissue or organ transplants and grafts and for treating T-cell specific leukaemias or lymphomas and autoimmune diseases including rheumatoid arthritis, multiple sclerosis, diabetes mellitus, inflammatory bowel disease and Crohn's disease. The antibodies can also be used for treatin immunologic renal diseases, glomerulonephritis, mesangloproliferative disease, chronic lymphocytic leukaemia, secondary glomerulonephritis or vasculitis associated with lupus, polyarteritis, scleroderma, HIV-relate disease, amyloidosis and haemolytic uraemic syndrome. (I) and the antibodies can also be used for renal or urological neoplasms and multiple myelomas, asthma, bronchitis, emphysema and other chronic

for treating

HIV-related

and truncated zcytor19 proteins. (I) has immunosuppressive, cytostatic, antirheumatic, antiarthritic, neuroprotective, antiinflammatory,

present invention describes an isolated human zcytor19 protein (I).

antidiabetic, nephrotropic, dermatological, anti-HIV and natious carred activities, and can be used in vaccines. (I) or an antibody binding (I)

airway diseases. Human zcytor19 is located to chromosome 1, more specifically to chromosome 1p36.11. The present sequence represents a human IgG gamma 1 heavy chain protein, which is used in an exampl

The immunoadhesin has plant-specific glycosylation and virucide activity. The immunoadhesin is useful for reducing infection by human rhinovirus (HRV) and hence the initiation or spread of the common cold by HRV. The immunoadhesin binds to HRV and reduces its infectivity, competing with cell surface ICAM-1 for binding gites, interfering with virus entry or uncoating and directing premature release of viral RNA and formation of empty capsids. Expression of the immunoadhesin having multiple binding sites have a higher effective affinity for the virus, thereby increasing the effectiveness of the immunoadhesin. Association of secretory component and immunoglobulin J chain increases the stability of the immunoadhesin the mouosal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      environment. Production is significantly less expensive in plants than animal cell culture and production in plants is safer for human use, since plants are not known to harbor any animal viruses. The present sequence is that of a human immunoglobulin protein sequence, useful to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the invention.
